

1D Class presentation

Scene 1

Time: 2099

Place: Street

Characters: Scientist, Narrator

Narrator: It is 2099 now. People are on the street and the Earth has lots of pollutions. People on the streets are escaping in a terrifying way.

(Two persons are going up the left stairs and two persons are going up the right stairs. They are running messily into each other. The scientist walks onto the stage.)

Scientist: The earth is sick and is in serious conditions now!

Scientist : *(Picking up the deadfish...)* Oh my God! There are lots of dead fish! Geeee! There are also plenty of plastic bags too! Em...I should go back to the past to save the Earth by my new invention Time Machine. Where year should I go? Let me press this button first.

Scene 2

Time: 2017

Place: Home

Characters: Dad, Mum, Scientist, Narrator

(Dad and Mum walk up to the stage.)

Scientist: Oh! Where am I? Oh my God! I am back in 2017, the year when I was born.

Narrator: The scientist is now a baby in his mom's arm.

Dad: Oh darling, thanks for giving me the greatest present on earth!

Little Addison! Welcome to our family!

(The scientist walks onto the stage and shakes his head.)

Scientist: Oh my God! That's me? Can't believe it! How lovely!

Oh! Dad & mum! I miss you two so much! *(raising his arms.)*

Dad: Hold on!! Who are you? We don't know you! Get away!

Scientist: I'm your son! Addison! This is me! *(Scientist pointing to the photo taken with Dad and Mum.)* Dad, you have a mole on your left foot, and mom, you have a mole on your right foot too! Right?

Mum: Oh! You know our secrets! You are really our son!!! Oh, dear! You are soooo old now!!! Why are "the old" you here now?

Scientist: I am now a scientist from the year 2099. Look, this is the Time Machine I invented. It brought me here! *(pointing to the time machine)* The Earth is sick and is in serious conditions in 2099! I came back to 2017 because I want to tell people to save the energy.

Dad: That's awesome! Proud of you, my son. Tell us how. Tell us how.

Scientist: Just like saving water and use less plastic bags, we can simply follow the **3Rs principles—reduce, reuse, recycle.** *(Ms. Water walks to the stage)*

Ms Water: Yes, sir and madam. I'm Ms Water. It's very simple to conserve water. Turn off the tap instead of letting the water run while you brush your teeth or wash your face. Wash dishes in a basin rather than under running water. Take a short shower instead of a bath. Run the washing machine only when you have a full load..... *(Mr. Plastic Bag walks onto the stage)*

Mr. Plastic Bag: Excuse me! *(raising his hand)* I have something to

say too. I've found that each Hongkonger uses 4 plastic bags daily on average and the waste of plastic bags increases yearly. Hong Kong people usually use foam containers for take-away food and plastic bags for shopping. Therefore, I suggest **BYOB!**

Mom: What is BYOB?

Scientist: It stands for **Bring Your Own Bag!** Remember to bring your own bag or container when you go shopping or buy take-away meals! Always bear in mind BYOB and the 3Rs!

Dad: Oh I see! Let's tell others together now!

All: We must take actions right now! Go go go!

Narrator: The Earth has lots of problems now, including water shortage, pollution, solid waste and so on. Although saving energy and preventing pollutions are difficult, our Earth can recover if everyone makes an effort in our daily life! Otherwise, the Earth will become like this!

(Everyone gets on stage)

All: Thank you!

-----THE END-----
